26 Financial Instruments :

26.01 Capital Management :

The Company manages its capital to ensure that the Company will be able to continue as a going concern and maximising the return to stakeholders through efficient allocation of capital towards expansion of business, optimisation of working capital requirements and deployment of surplus funds into various investment options. The funding requirement is met through equity, internal accruals, long term borrowings and short term borrowings.

The Company monitors the capital structure on the basis of net debt to equity ratio and maturity profile of the overall debt portfolio of the Company. Net debt includes interest bearing borrowings less cash and cash equivalents and other bank balances.

The table below summarises the capital, net debt and net debt to equity ratio of the Company :

Market risk is the risk of loss of future earnings, fair values or future cash flows that may result from a change in the price of a financial instrument. The value of a financial instrument may change as a result of changes in the interest rates and other market changes that affect market risk sensitive instruments. Market risk is attributable to all market risk sensitive financial instruments.

A Credit Risk

Credit risk arises from the possibility that the counter party may not be able to settle their obligations as agreed. To manage this, the Company periodically assess financial reliability of customers, taking into account the financial condition, current economic trends and analysis of historical bad debts and ageing of accounts receivable.

The Company has used a practical expedient by computing the expected credit loss allowance for trade receivables based on a provision matrix. The provision matrix takes into account historical credit loss experience and adjusted for forward-looking information. The expected credit loss allowance is based on the ageing of the days the receivables are due and the rates as given in the provision matrix. The provision matrix at the end of reporting period as follows:

Movement in the expected credit loss allowance

Particulars	As at 31st March 2025	As at 31st March 2024
Balance at the beginning of the year	58.62	58.62
Movement in the expected credit loss allowance	-	-

B Liquidity Risk

Liquidity risk represents the inability of the Company to meet its financial obligations within stipulated time. The Company manages liquidity risk by maintaining adequate reserves and banking facilities, by continuously monitoring forecast and actual cash flows, and by matching the maturity profiles of financial assets and liabilities.

The table below summarises the maturity profile of the Company's financial liabilities based on contractual undiscounted payments

26 Financial Instruments :

26.01 Capital Management :

The Company manages its capital to ensure that the Company will be able to continue as a going concern and maximising the return to stakeholders through efficient allocation of capital towards expansion of business, optimisation of working capital requirements and deployment of surplus funds into various investment options. The funding requirement is met through equity, internal accruals, long term borrowings and short term borrowings.

The Company monitors the capital structure on the basis of net debt to equity ratio and maturity profile of the overall debt portfolio of the Company. Net debt includes interest bearing borrowings less cash and cash equivalents and other bank balances.

The table below summarises the capital, net debt and net debt to equity ratio of the Company :

Market risk is the risk of loss of future earnings, fair values or future cash flows that may result from a change in the price of a financial instrument. The value of a financial instrument may change as a result of changes in the interest rates and other market changes that affect market risk sensitive instruments. Market risk is attributable to all market risk sensitive financial instruments.

A. Credit Risk

Credit risk arises from the possibility that the counter party may not be able to settle their obligations as agreed. To manage this, the Company periodically assess financial reliability of customers, taking into account the financial condition, current economic trends and analysis of historical bad debts and ageing of accounts receivable.

The Company has used a practical expedient by computing the expected credit loss allowance for trade receivables based on a provision matrix. The provision matrix takes into account historical credit loss experience and adjusted for forward-looking information. The expected credit loss allowance is based on the ageing of the days the receivables are due and the rates as given in the provision matrix. The provision matrix at the end of reporting period as follows:

Movement in the expected credit loss allowance

Particulars	As at 31st March 2025	As at 31st March 2024
Balance at the beginning of the year	58.62	58.62
Movement in the expected credit loss allowance	-	-
Balance at the end of the year	58.62	58.62

B. Liquidity Risk

Liquidity risk represents the inability of the Company to meet its financial obligations within stipulated time. The Company manages liquidity risk by maintaining adequate reserves and banking facilities, by continuously monitoring forecast and actual cash flows, and by matching the maturity profiles of financial assets and liabilities.

The table below summarises the maturity profile of the Company's financial liabilities based on contractual undiscounted payments.

Particulars	Less than 1 year	1 to 5 years	Above 5 years	Total
Balance 31 March 2025				
Trade Payable	293.32	-	215.94	509.26
Other Financial Liabilities	194.93	340.00		534.93
Total	488.26	340.00	215.94	1,044.20

Other Financial Liabilities		334.23		334.23
Total	215.94	334.23	-	750.17

C Market Risk- Interest Rate Risk

Interest rate risk is the risk that the fair value of future cash flows of the financial instruments will fluctuate because of changes in market interest rates. The Company has not made paid any interest during the year and no interest income has not been earned during the year and hence the interest rate risk does not affect the Company directly.

D Market Risk- Foreign Currency Risk

The Company does not export or import any goods or services and hence are not affected directly by foreign currency risk.

30 Going Concern

The company had drawn a business plan for turnaround of its business. The plan has resulted in an increase in Sales during the current financial year. The collection in long outstanding debtors has resulted in reversal of provision on debtors provided during the previous years, which has resulted in reduction of loss to such extend. Though the negative net worth is a matter of concern, the company is confident that the business plan drawn up will enable it to settle the redemption liability as and when it becomes due.

31 Fair value hierarchy

The following table provides the fair value measurement hierarchy of the Company's financial assets and financial liabilities.

All financial assets and financial liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

Level 1 — Quoted (unadjusted) market prices in active markets for identical assets or liabilities.

Level 2 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable.

Level 3 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable.

For assets and liabilities that are recognised in the financial statements on a recurring basis, the Company determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.
